Isotype	Species Reactivity	Applications	Mol. Weight	Ref.Cell Line	Epitope		Immunogen	
lgG1	human	ICC		none	C-Terminus c $\beta A4 (1-40) ar$ crossreacts w	<u>nd</u> βA4 (1-42)	C-terminal peptide conjugated to KLH	
Backgrou	nd and Specificity:					Related Products		
The beta-amyloid peptide (beta A4), proteolytically released from the amyloid precursor protein (APP), is the principal component of senile plaques in Alzheimer's disease. Cleavage of APP by alpha-secretase or alternatively by beta-secretase leads to generation and extracellular release of soluble APP peptides, S-APP-alpha and S-APP-beta, respectively, and the retention of corresponding membrane-anchored C-terminal fragments, C83 and C99. Subsequent processing of C83 by gamma-secretase yields P3 peptides. This is the major secretory pathway and is nonamyloidogenic. Alternatively, presenilin/nicastrin-mediated gamma-secretase processing of C99 releases the amyloid beta proteins, amyloid-beta 40 (Abeta40) and amyloid-beta 42 (Abeta42), major components of amyloid plaques, and the cytotoxic C-terminal fragments, gamma-CTF(50), gamma-CTF(57) and gamma-CTF(59). <b>Mab</b> $\beta$ A4(40/42)-9F1 interacts with the C-termini of both $\beta$ -Amyloid (1 - 40) and (1-42).						mab to βA4, N-Terminus   #0064-100/bA4N-19H5   mab to βA4, N-Terminus   #0084-100/bA4N-19H11   mab to βA4, N-Terminus   #0195-100/bA4N-7F4   mab to βA4, N-Terminus   #0196-100/bA4N-7F4   mab to βA4, N-Terminus   #0196-100/bA4N-7F9   mab to βA4, N-Terminus   #0197-100/bA4N-7F9   mab to βA4, N-Terminus   #0197-100/bA4N-11H3   mab to βA4 (1-40), C-Terminus   #0060-100/bA4(40)-5C3   mab to βA4 (1-40/42), C-Terminus   #0062-100/bA4(40/42)-9F1		
Purificatio	sup	e antibody was purified from serum-free cell culture ernatant by subsequent thiophilic adsorption and size lusion chromatography.				mab to βA4 (1-42), C-Terminus #0061-100/bA4(42)-8G7 mab to βA4 (1-43), C-Terminus		
Formulation:		uid; 0.5 mg/ml in PBS/0.09% Na-Azide/PEG and Sucrose				#0095-100/bA4(43)-6G12		
Reconstitution:								
Stability:	-80° stor	quote and freeze in liquid nitrogen; store aliquots frozen at <sup>o</sup> C up to 1 year. Thaw aliquots at 37°C. Thawed aliquots may be red at 4°C up to 3 months.						
Avoid repeated freeze / thaw cycles.								
Positive Control: none								
Immunobl		ase use unlabelled lication. See relat						
Immunoprecipitation: ND								
Immunocytochemistry: use at 1 - 10 μg/ml
